Is a 10kW solar panel system worth it?

A 10kW solar panel system is definitely worth it in the long term, even if your household electricity consumption is relatively low. On average, you can save 86% on your electricity bills with a solar & battery system.

What are the disadvantages of photovoltaic systems?

Disadvantages of photovoltaic systems are that: they may not be particularly beneficial at reducing carbon. New Zealand grid electricity is already largely produced from low-carbon renewables (such as hydro and wind) and PV systems are produced in a carbon-intensive manufacturing process.

Is a 10kW solar system profitable?

A 10kW system can be extremely profitable for households that are connected to the grid, as they can sell excess electricity through an export tariff - but for an off-grid home, it's a large expense that may result in a lot of wasted energy. Is a 10kW solar panel system worth it?

What is a 10kW Solar System?

You might also see a 10kW solar panel system referred to as a 10kWp (kilowatt peak) system. In this context, there's no difference between the two. How many solar panels are in a 10kW system? The number of solar panels in a 10kW system depends on the power rating of the panels themselves.
