-----  
What's behind the Dittenheim solar project?

The site - in the Bavarian municipality of Dittenheim, about 120km north of Munich - has been part-powered by energy from 12 sqm of solar modules installed more than a year ago. The two companies have since added a wind turbine, capable of providing up to five kilowatts of additional power, as a second renewable energy power source.

How can Germany improve its power system?

This includes making demand more flexible, and adding electricity storage systems. Graph: CLEW. Germany's priority before was to increase renewable capacity, but as more and more wind and solar projects come online the inflexible corset of the conventional power system is beginning to burst at the seams.

Is Germany still a pioneer in renewables?

Germany is still a pioneer amongst big industrialised economies in rolling out renewables - meaning the discussions that the country is having now will be relevant for others around the world in future. Photo: Stiftung Offshore-Windenergie. What is Germany's trademark renewable support scheme?

How does WPD support wind energy projects?

Wind energy projects are complex feats of planning. wpd supports onshore projects across all phases to ensure that targets are hit and profitability guaranteed. Solar energy constitutes a further important contribution towards the success of the energy turnaround. wpd is also operating worldwide in this growing market and expanding its portfolio.

The expansion of solar energy in Berlin is set to accelerate in the future. To this end, the Senate has decided to extend the "Solarcity Master Plan" for the years up to 2030.

A solar Telecom power system is durable, reliable and convenient; just install it wherever you need power
