What is the largest source of electricity in Brazil in 2024?

In 2024, solar power, when including distributed generation, became the second largest source of electricity in Brazil, surpassing wind power, and reaching almost 50 GW. Utility scale solar energy in Brazil reached 16.4 GW, while distributed generation from solar accounted for 34 GW in 2024.

How clean is Brazil's electricity matrices?

However, further reforms are still expected. Brazil has one of the cleanest electric matrices in the world, as 85.06% of its power generation capacity comes from renewable sources. This share is led by hydroelectric plants (52.35%), followed by wind (15.89%), biomass (8.41%) and solar photovoltaic power plants (8.41%).

How much power does Brazil have?

Brazil has a generation system with proven capacity of more than 150 GW, with most of the energy coming from hydro, due to Brazil's abundance of powerful rivers. The Brazilian hydroelectric potential is estimated at 172 GW, of which more than 60% has been developed.

Does Brazil regulate battery energy storage systems?

Inclusion of Battery Energy Storage Systems in the Regulatory Framework The current Brazilian power regulatory framework does not regulate the implementation and operation of battery energy storage systems, nor pumped-storage hydroelectric power plants.
