Compressed-air-energy storage (CAES) is a way to store energy for later use using compressed air. At a utility scale, energy generated during periods of low demand can be released during peak load periods. The first utility-scale CAES project was in the Huntorf power plant in Elsfleth, Germany, and is still operational as of 2024. The Huntorf plant was initially de...

Compressed air energy storage (CAES) is an effective solution for balancing this mismatch and therefore is suitable for use in future electrical systems to achieve a high ...

Need for Peaking Power The power industry is seeing a heightened need for peaking-capacity resources as capacity from retiring power plants is lost and higher levels of renewable ...
