What is an IP55 rating in outdoor cabinets?

The IP rating on enclosures is an international protection standard that indicates how well the cabinet is protected against two factors: the ingress of dust or solid particles, and the ingress of water.

What is an IP55 rating?

The correct IP classification directly affects the stable operation of installed equipment. One of the most widely used protection levels is IP55. In this article, we explain what an IP55 rating is, how protection against dust and water is achieved, and which design features allow an IP55 enclosure to withstand outdoor and industrial environments.

What is the IP rating on a cabinet?

The IP rating on enclosures is an international protection standard that indicates how well the cabinet is protected against two factors: the ingress of dust or solid particles, and the ingress of water. The IP55 marking includes two digits that determine the nature and intensity of the enclosure's protection against external influences.

How do I choose the right IP rating for my charging station?

Selecting the appropriate IP rating depends on the installation environment and usage conditions. For indoor charging stations, a lower IP rating like IP44 might suffice. However, for outdoor DC fast charging stations, a higher rating such as IP65 or IP67 is advisable.

Integrated Outdoor Telecom Cabinet with Air Conditioner (with sandwich panel double-wall structure design) is mainly used for wireless communication base station to house a variety of ...
