It offers near real-time data on the deployment of storage facilities across Europe, including an interactive dashboard and map, and identifies all the technologies, from battery ...

Coupling renewables and clean flexibility growth, the EU can benefit from abundant home-grown wind and solar, reduce dependence on imported fossil energy, and ...

Established in 2012, Alpha ESS is a leading global provider of green energy storage solutions and services. Operating from four production facilities worldwide, we boast an annual production ...

By the end of the decade, storage will be deployed at a rate of 20-25GW per year, which is more than 20 times the rate of installation in the 2020s. Utility-scale energy storage to see strong ...

With an expected capacity of 150 megawatt-hours, this will become Europe's largest distributed virtual power plant and one of the largest European battery storage ...

This report focuses on the latest market trends and the major drivers and barriers across the segment. It also analyses how policy development and economic factors draw ...

As Europe continues its transition to a more sustainable and resilient energy system, energy storage remains a critical enabler of renewable energy expansion. The report ...

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade ...

2025 will be the first time in over a decade that solar power additions decline in the EU, largely due to waning

rooftop installations.

The latest edition of the European Market Monitor on Energy Storage by the European Association for Storage of Energy and LCP Delta, released on 31 March, highlights ...

Energy Insights + How can we best use energy insights to enhance residential customer engagement and create value for us and our customers? Energy Storage Research Service ...

Making use of the EU Modernisation Fund, this investment grant scheme encompasses energy-efficient home renovations, including solar PV and battery storage, ...

In Eastern Europe, too, large battery storage systems are becoming increasingly popular as a result of the expansion of renewable energies and the pursuit of energy security.

The EU is on track to install a record 89GW of renewable energy capacity in 2025, including 70GW of solar and 19GW of wind power.

Germany continued to lead Europe's residential storage sector, adding over 510,000 new installations in 2024, even after a 10% decline, the LCP Delta and EASE find.

By the end of 2023, the cumulative PV capacity, encompassing distributed and utility-scale installations, reached 2.85 GW, generating over 2.5 TWh, contributing ...

DTEK and Fluence have begun commissioning Ukraine's largest battery energy storage system, a 200 MW/400 MWh installation spread across six sites that represents one of ...
