Why do energy storage clusters deftly discharge energy during peak load periods?

During peak load periods, energy storage clusters deftly discharge stored energy to alleviate grid strain, concurrently adjusting power output in response to frequency variations to uphold grid stability .

How do energy storage dispatch centers meet peak shaving and frequency regulation?

For the energy storage dispatch center, in order to meet the demands of peak shaving and frequency regulation in the power grid, it is necessary to allocate the grid's requirements to individual energy storage stations.

What is the difference between dedicated frequency regulation and peak shaving?

All dedicated frequency regulation energy storage stations are allocated solely for the purpose of frequency regulation, while all dedicated peak shaving energy storage stations are exclusively utilized for peak shaving.

How ESS can adjust grid frequency within the allowable range?

ESS can adjust grid frequency within the allowable range as ESSs have the features of high degree of automation, flexibility of operation and rapid response to random and transient changes in load. Thus, flywheel, SMES, batteries and flow batteries are ideal for this service.
