Why do we need a vanadium supply chain?

For U.S. deployments, it becomes increasingly important to onshore or friend-shore the supply chain to support the anticipated energy storage required to transition to clean energy. Despite significant deposits, there are no primary producing vanadium mines in North America. However, plans are underway to address this situation.

What is the contribution of energy storage to vanadium demand?

The contribution of energy storage to vanadium demand is increasing rapidly¹. Overview and examples of recent VFB projects and installations outside of China (1/2) Invinity will supply an 8.4MWh VFB to a solar-plus-storage project in Alberta, Canada. It will be paired with a 21MW solar PV plant.

Are vanadium redox flow batteries the future of battery chemistry?

Combined with the need for increased safety and stable capacity over years and decades, LDES is leading us toward a different path, where new promising battery chemistries such as vanadium redox flow batteries (VRFB) are poised to take a prominent role.

Does storion offer leased vanadium?

Storion will also have exclusive access to provide "leased" vanadium to the market through Largo Physical Vanadium. With this solution, the U.S. Department of Energy's (DOE) Long Duration Storage Shot goal to reduce the levelized cost of storage (LCOS) to \$0.05/kWh by the end of the decade can be accomplished today.
