Is Ethiopia a leader in Africa's electric vehicle transition?

Ethiopia has emerged as an unexpected leader in Africa's electric vehicle (EV) transition. In 2023, the country became the first in the world to ban imports of internal combustion engine (ICE) vehicles.

How many EVs are there in Ethiopia?

According to the Ministry of Transport and Logistics, the country now has 100,000 EVs on its roads, accounting for roughly 8.3% of its estimated 1.2 million registered vehicles. If accurate, that would make Ethiopia the clear front-runner in EV penetration on the continent, and a surprising contender among top global adopters.

Are used cars a problem in Ethiopia?

Like most African countries, Ethiopia's roads are dominated by used cars, which make up around 85% of vehicles. But a complex mix of high import duties -- historically as high as 200% -- and chronic foreign currency shortages have long made car ownership out of reach for most Ethiopians.

What does Ethiopia's EV push mean for the EV industry?

Against this backdrop, Ethiopia's EV push marks a dramatic pivot. The ICE ban, combined with import duty waivers and tax exemptions for EVs, signals a radical shift in transportation policy. If government-reported EV figures are accurate, they point to a wholesale transformation of the national vehicle fleet in a remarkably short time period.

Ministry of Water and Energy (MoWE) and Ethiopian Electric Power (EEP) published the first Ethiopian Energy Outlook in 2022. The outlook is meant as a review of the ...

Ethiopia is making waves in Africa's transportation landscape with a bold statistic: over 60% of new vehicles sold in the country are now electric. This milestone signals the dawn ...

As a result, electric vehicles accounted for over 60% of new registrations by the end of 2024. Ethiopia's transition to clean mobility relies on its ...

Ethiopia has emerged as an unexpected leader in Africa's electric vehicle (EV) transition. In 2023, the country became the first in the ...

Explore Ethiopia's growing electric vehicle market, including prices, models, delivery options, and government incentives for sustainable transportation.

Most of the cars on the road are secondhand imports, and black smoke is often seen rising from the rear of these vehicles, underscoring the government's need to push for ...

Ethiopia is taking bold steps toward a green economy by accelerating the adoption of electric vehicles (EVs), a move designed to combat climate change and reduce dependence ...

Community energy systems, which are off-grid energy systems in which communities play a key role, offer alternative strategies to close the country's energy access ...

The energy storage system (ESS) revolution has led to next-generation personal electronics, electric vehicles/hybrid electric vehicles, and stationary storage. With the rapid application of ...

Ethiopia is leading Africa's electric vehicle transition through innovative policies, renewable energy investment, and local assembly initiatives.

Additionally, earlier measures banned the importation of gasoline and diesel vehicles, reflecting the nation's green ambitions. Ethiopia's reliance on renewable energy ...

Ambitious government targets, Ethiopia's abundant renewable energy resources for instance hydropower and geothermal, cost-effective and environmentally friendly mode of the ...

The classification of energy storage technologies and their progress has been discussed in this chapter in detail. Then metal-air batteries, supercapacitors, compressed air, ...

Rapid adoption of electric vehicles (EVs) is reducing reliance on costly fuel imports while leveraging Ethiopia's renewable energy resources. Ethiopia has vast, largely untapped ...

Over the past 10 years, the energy sector has been totally disrupted. The world is now moving into an era of renewable and smart energy. In contrast, Lebanon's energy model still relies on ...
