Does China need a subsidy analysis for photovoltaic energy storage integration?

In the context of China's new power system, various regions have implemented policies mandating the integration of new energy sources with energy storage, while also introducing subsidies to alleviate project cost pressures. Currently, there is a lack of subsidy analysis for photovoltaic energy storage integration projects.

Do photovoltaic energy storage systems have a cost-benefit model?

In the aspect of investment and profitability analysis of photovoltaic energy storage systems, literature constructs a cost-benefit model based on the structure of distributed photovoltaic energy storage systems to evaluate and compare the net income and cost-profit ratio of different user types under different electricity price models.

Do energy storage subsidy policies stimulate photovoltaic energy storage integration projects?

The results indicate that, while the current energy storage subsidy policies positively stimulate photovoltaic energy storage integration projects, they exhibit a limited capacity to cover energy storage investment costs, thereby failing to incentivize capital market participation in the construction of such projects.

Is photovoltaic power generation economically viable in northern China?

In northern China, photovoltaic power generation is more economically viable. Considering the configuration ratio of energy storage equipment and subsidy policies, combined with the future development of new energy in the "Three North" regions, the economic analysis of photovoltaic and energy storage integration has high promotional value.

The energy storage industry has made great progress in developing technology, standards, and market policies and is poised to offer solutions to rapidly changing energy ...
