Below are the published reports for the Energy Transition Forecast (earlier the Fuel Forecast). These documents are only available in Icelandic.

Why do we need a co-optimized energy storage system? The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change ...

In this article, we'll explore how Iceland accomplished this milestone, why it matters globally, the technologies behind it, the positive ripple effects on society, and what lessons the world can ...

It has also been an integral component of electricity generation, transmission and distribution systems for well over a century. Traditionally, the capacity for energy storage has ...

Why Energy Storage Matters in 2025 (and Why You Should Care) Ever wondered how a war-torn country like Afghanistan and a geothermal paradise like Iceland both face the same energy ...

There will be a report in the Winter issue of Energy Global that will cover Iceland's renewable energy scene in greater depth. Meriting a separate article, however, was Iceland's carbon ...

(Bloomberg) -- Iceland's new government plans to allow energy companies to begin three new power plant projects this year, while it is still mulling the terms for foreign ...

An off-grid solar system's size depends on factors such as your daily energy consumption, local sunlight availability, chosen equipment, the appliances that you're trying to run, and system ...

Article 5 also establishes Iceland's Climate Council and defines its role in providing restraint and advising the government regarding Iceland's Climate Action Plans.

Iceland's journey to becoming a global leader in renewable energy is rooted in its unique geological profile. The island nation has long leveraged its volcanic heat to generate ...

Battery storage. In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already ...

Iceland, a nation renowned for its vast geothermal and hydroelectric power, is embarking on a significant expansion of its solar energy sector in 2025.

This initiative seeks to use Iceland's long summer daylight hours to create a more resilient and diversified energy system.

The new initiative features plans for 1 MW solar minigrids tied with 4 MWh of accompanying battery energy storage, to be deployed across 80,000 villages, alongside 20 ...

This is the highest share of renewable energy in any national total energy budget. In 2016 geothermal energy provided about 65% of primary energy, the share of hydropower was 20%, ...

By examining country-specific energy data for Denmark, Finland, Iceland, Norway, and Sweden, the report provides information on what progress has been made in critical ...

Welcome to Iceland's latest energy storage policy saga - where geothermal steam meets cutting-edge battery tech in a nordic dance of innovation. As of 2025, Iceland's updated strategy is ...

We were particularly excited by Space Solar's ambitious vision to make solar energy viable as baseload power. The technology involves satellites that convert sunlight into radio waves and ...
