-----

Utility-scale solar projects in Sweden, Finland, and Denmark are flourishing, while battery storage and AI are reshaping what's possible for grid stability and long-term power ...

A significantly higher proportion of power equipment, connected via power electronics, presents significant challenges to the future power system, but with a common ...

Nordic Semiconductor today announces that Tokyo, Japan-based energy solutions company, West Group, has selected Nordic's nRF9160 low power System-in-Package (SiP) with ...

Nordic Solar, the Danish firm behind this ambitious project, highlights the park as one of their most significant investments in Lithuania's energy infrastructure. Nikolaj Holtet ...

These sources provide information on aggregated installed capacity and generation by technology type. Capacity is typically provided by year; generation data is often provided by month. For ...

Renewable energy generation: Nordic power demand is projected to double by 2050, with onshore and offshore wind and solar becoming the dominant growth technologies. ...

Octopus Renewables Infrastructure Trust plc (LON:ORIT) has made a new EUR-3.4-million (USD 3.5m) investment in Nordic Generation (Norgen) to support the development ...

This study analyses how the rapid growth of utility-scale solar PV in the Nordic region will impact its economic viability by 2030, using Finland as a case study. The analysis is based on ...

Discover the Nordic grid system's intricacies and seize solar prospects across Norway, Sweden, Denmark, and Finland in this comprehensive guide.

In the Nordic countries, accelerating the deployment of solar PV could be the quickest way to increase power-generation capacity short-term. ...

The report communicates our shared perspective on key development trends in the power system and strategies to address emerging challenges. It also provides a status update on ongoing ...

During the recent surge in solar PV installations, the Nordic countries - Sweden, Norway, Finland, and Denmark - have increasingly embraced ...

We develop, construct, and operate utility-scale solar parks across Europe on our mission to make everyone benefit from solar energy. As we pursue this mission, our vision is to emerge ...

This paper presents ODIN, an open dispatch model for the Nordic power system. We begin by performing a survey of existing models, and conclude that no model which ...

The power generated from solar has already surpassed the CNS 2030 target of 1 TWh. Electricity generation from geothermal energy has stabilised at just above 6 TWh, topping the CNS ...

In recent years, the Nordic countries have made significant strides in incorporating solar energy into their renewable energy mix. This blog delves into the key trends and ...

The models predict that 76%-82% of the new electricity production will come from wind power, split between onshore and offshore installations, highlighting significant ...

Solar panel technology has come a long way, and the Nordic countries are at the forefront of harnessing these innovations. Research and development in solar photovoltaic ...
