What are the different options for energy storage projects?

In each case, there are a number of different options and alternatives. When developing an energy storage project, a project owner can engage an EPC contractor to provide a fully-wrapped EPC agreement that will encompass the procurement, installation, and commissioning of batteries.

How does the US power grid work?

The US power grid operates on an AC current at 60 Hz. Most renewable generation (wind and solar) and battery energy storage generate direct current, meaning that the flow of electrons is in only one direction. A transformer is required to transform this DC into AC so that it can be transmitted onto the power grid.

Are solar manufacturers circumventing antidumping and countervailing duty orders?

The solar market was further constrained by an ongoing petition before the US Department of Commerce alleging that certain solar manufacturers in Southeast Asia were circumventing antidumping and countervailing duty (AD/CVD) orders on solar cells and modules from China.
