-----  
How has the Russia-Ukraine war affected Russia's energy sector?

The Russia-Ukraine war has been brutal to the Russian energy sector. New problems are emerging, and old issues are accumulating as Russia enters 2026. Losing Syria in December of 2024 and Venezuela in January 2026 exposes Russia's global ambition as an emperor with no clothes. Ukraine's bloody slog comes at a huge cost.

Will Russia's economic growth slow down next year?

Last month, the central bank also lowered its forecast for Russia's economic growth next year to 0.5 to 1.5 percent, compared with 3.5 to 4 percent this year. The slowdown comes even as the government continues to pump record amounts of money into the economy to finance the war.

Why does Russia need more electricity?

Domestic electricity demand continues to climb to meet the needs of Russia's expanding defense industrial base. At the same time, unsold gas in Europe is being converted into aluminum and fertilizer for export, while power generation and grid expansion lag.

Is the Russian economy moving toward stagflation?

The slowdown comes even as the government continues to pump record amounts of money into the economy to finance the war. The combination of rising prices and falling economic activity has led some economists and officials to warn that the Russian economy is moving toward stagflation, a quagmire where prices rise quickly without growth.

Western nations have subjected Russia over the last three years to some of the strictest economic sanctions in modern history to punish President Vladimir V. Putin for his ...

By the end of 2024, home solar and storage still accounted for 57% of Europe's total accumulated BESS
