Do vented lead acid batteries need a separate battery room?

Vented lead acid batteries installed in medium voltage main substation buildings and unit substations, electrical equipment rooms and control system rack rooms shall not require a separate, dedicated battery room and shall be in accordance with SES E14-S02. The battery room and installation shall comply with IEEE 484, NFPA 70 and OSHA 29 CFR.

What is a battery cabinet / rack?

EverExceed designs customized battery cabinets / racks for individual batteries. The cabinet or racking system can be specified to accommodate any battery cell. From flooded to sealed, from lead acid to nickel cadmium and from vertical to horizontal all kinds of battery cabinet / rack can be designed flexibly to save the space in battery room.

Which accumulator batteries are included in the cabinets covered by the technical specification?

The cabinets covered by the technical specification have been designed to contain the hermetic lead-acid electric accumulator batteries.

What are the construction characteristics of recombination type lead-acid electric accumulators (valve-regulated Hermetic)?

The construction characteristics of the recombination type lead-acid electric accumulators (valve-regulated hermetic accumulators); the absence of acid fumes and the virtual absence of gaseous development allows it to be installed in suitable containment cabinets.

It does not cover maintenance free or computer room type batteries and battery cabinets. Main keywords for this article are Battery Room Design Requirements, vented lead acid batteries, ...

The battery shall be located as close as practical to the load. This will reduce the cost and exposure of the dc distribution system.
The battery room shall be located in a way that provides access for lifting equipment to be used during initial installation and future maintenance operations.
The location shall be as free from vibration as practical. The battery shall be located as close as practical to the load. This will reduce the cost and exposure of the dc distribution system.
The battery room shall be located in a way that provides access for lifting equipment to be used during initial installation and future maintenance operations.
The location shall be as free from vibration as practical.
The location shall be selected so as to protect the battery from flooding and other natural phenomena, and from fire and explosions in the operating areas.
