-----  
Will Greece become a regional gas hub?

Greece's aspiration to become a regional gas hub has been tempered by increasingly stringent climate targets and efforts to reduce the use of natural gas as part of the EU's response to the Ukraine war. The country has now pivoted towards becoming a green energy powerhouse at the intersection of regional and trans-continental electricity flows.

How much natural gas will Greece transport a year?

Upon its completion, this ambitious project is projected to transport an estimated 20-25 billion cubic meters of natural gas annually from south to north, positioning Greece as a leading player in securing Europe's energy independence from Russian supplies and significantly enhancing its geopolitical standing.

How has Greece increased its LNG import capacity?

Greece, which typically consumes about 6-7 billion cubic meters of gas a year, has increased capacity for LNG imports through the upgrade of its Revithoussa LNG terminal and the recently completed Alexandroupoli floating storage regassification unit (FSRU).

Where is Greece building a new LNG terminal?

In addition to completing the IGB interconnector, Greece went ahead with building a new LNG terminal in the northern port city Alexandroupoli. The Alexandroupoli FSRU received its first test shipment of LNG in March 2024.
