What is a VS-24 hydrogen gas ventilation system?

The VS-24 Hydrogen Gas Ventilation System is designed for large battery storage areas and industrial applications where high-volume hydrogen gas removal is required. Best for: Large battery rooms, UPS power systems, industrial storage areas, and utility substations.

Can a battery room be ventilated?

Energy recovery ventilators (ERVs) using an enthalpy core have proven effective for ventilating battery rooms. Before deciding on a solution, consider the relevant standards and local codes. Battery Room Ventilation Requirements While charging, batteries used in data centers emit hydrogen gas.

Can a data center battery room be ventilated?

While numerous HVAC solutions for ventilating a data center battery room are possible, an ERV with enthalpy core is a space-efficient technology that provides continuous ventilation and energy recapture to reduce the building's cooling load. The MiniCore also features direct drive fans and Vari-Green™; electronically commutated motors.

Why do you need a ventilation system?

Designed for safety, reliability, and compliance, our ventilation solutions protect your facilities from dangerous gas buildup while maintaining optimal environmental conditions. Battery rooms and critical facilities often produce hazardous gases, such as hydrogen, which can accumulate to unsafe levels. Eagle Eye's Ventilation Systems provide:
