Solar and wind waste is piling up with no clear plan for disposal, raising new questions about the cost of going green and the myth of net zero.

Wind Turbine Disposal and Recycling Strategies The wind industry is working to help advance sustainable disposal solutions through advanced recycling and repurposing methods while ...

Researchers have found a surprising new use for retired wind turbine blades -- making stronger, more resilient roads.

Researchers in China have hit upon a clever way to use discarded blades to build long-lasting roads - a method that could come in handy as we erect and decommission more ...

Road Map for Recycling Wind Energy Systems in the United States Part 1: Providing a Baseline for America's Wind Energy Recycling Infrastructure for Wind Turbines and Systems.

By transforming old blades into asphalt, scientists are proving that sustainability doesn't have to end when a ...

By transforming old blades into asphalt, scientists are proving that sustainability doesn't have to end when a wind turbine stops spinning--it can simply take another form, ...

Dump loads such as power resistances, electric water heaters or hot air heaters dissipate any excess power generated by wind or hydro generators into heat, helping maintain a stable ...

The rapid expansion of wind farms has led to a growing challenge: the escalating accumulation of decommissioned wind turbine blades in landfills. Addressing this issue ...

Dump loads such as power resistances, electric water heaters or hot air heaters dissipate any excess power generated by wind or hydro ...

Opponents of wind energy have seized on the problem as a reason to try to block new wind facilities. More than 1,000 blades are buried at the Casper Regional Landfill in ...

As the global push for renewable energy intensifies, an innovative solution emerges from China to tackle the growing challenge of decommissioned wind turbine blades, ...

Recycling Wind Energy Systems in the United States Part 1: Providing a Baseline for America's Wind Energy Recycling Infrastructure for Wind Turbines and Systems: U.S. Department of ...

Explore how the wind energy industry is addressing the challenge of turbine blade recycling through innovation in materials and circular solutions.

Whether you're powering a remote cabin, a hybrid wind-solar system, or a farm off the grid, a dump load ensures stable and reliable energy output. This article explores how ...

As more wind farms are built around the country, disposal of old or broken blades is a concern. Opponents of wind energy have seized on the problem as a reason to try to ...

With 800,000 tons of turbine blades disposed of in landfill annually, the wind industry has an environmental problem to solve. Over 12,600 turbines (that's over 37,800 ...
